Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP '616 in view of EP '093 and Harper, Jr.

EP '616 discloses coating compositions comprising polyorganosiloxane/acrylate copolymers, curing catalysts, colloidal silica and inorganic fillers. These compositions are taught as having flame retardant properties.

The reference lacks an explicit recitation of an inorganic flame retardant, an organic flame retardant or the application of these compositions to fabric.

EP '093 teaches the use of similar coating compositions as fabric coatings.

The reference to Harper, Jr. teaches the addition of antimony oxide and halogenated hydrocarbons as flame retardants in finish coatings on fabrics.

Therefore, it would have been obvious to incorporate additional flame retardants such as taught by Harper, Jr. when application to household or clothing fabrics was contemplated.
